WHAT IS HEARING LOSS?

When your child does not respond to sound at the normal level of hearing, he/she is experiencing a hearing loss.

HOW IS HEARING LOSS MEASURED?

Borderline (16-25dB)

The child may have difficulty hearing some soft sounds.

Mild hearing loss (26-40dB)

The child may have difficulty hearing faint or distant speech.

Moderate hearing loss (41-55dB)

The child may have limited vocabulary and delayed speech.

Moderate to Severe (56-70dB)

The child may have difficulty using language and understanding speech.

Sever hearing loss (71-90dB)

The child is unable to develop speech and language as expected.

Deaf or Profound (91-120+dB)

The child relies on vision rather than hearing as primary avenue for communication.
